

CMOv is a software-only solution that enabled all migrations, installations, and cutovers to be completed remotely.

THE CHALLENGE

A Fortune 500 company that is one of the world's leading manufacturers operating 78 plants in 23 different countries globally needed a complex upgrade to their IT infrastructure. They believe the ability to keep expanding as a company is a key to their success. Maintaining its leadership position requires the mentality of refusing to stand still, react to and embrace the latest industry trends. The capability to find new ways to innovate and create are key. In this new age of digital transformation, it's vital - which this manufacturer understands well.

In their quest to keep ahead, this manufacturer needed to quickly transform their storage and VMware environment with minimal downtime and no impact on operations. The project entailed moving 60 TB of data from three separate HPE arrays to one Dell EMC Unity array while upgrading 160 VM's from version 5.1 to version 6.7 directly.

Migrating directly to the newest VMware version and updating the VMware tools, the hardware profile, and updating the VM's storage to the latest data center versions were vital to perform during this migration. Storage vMotion does not allow for these features. However, Cirrus Data's CMOv Migration Solution does perform these functions in one easy step.

THE SOLUTIONS

Cirrus Data's CMOv Migration Solution provides the ability to directly migrate from any vCenter to any other vCenter regardless of version numbers and updates required. The VM hardware profile can update the VMware tools and the datastore where the VM resides to the latest level upon

cutover of the VM to the new vCenter and VMware version. These were the key benefits of this solution from Cirrus Data.

Dell EMC recommended the Cirrus solution to the customer and provided all the project management and professional services during the engagement. Cirrus Data engineers were available throughout the migration process as Subject Matter Experts on the end-to-end migration process, from design to implementation, migration, and eventual cutover of each VM.

Minimizing onsite work was crucial due to COVID. As a software-only solution, CMOv enabled all migrations, installations, and cutovers to be completed remotely.

QUICK FACTS

Customer Type

Fortune 500 Manufacturing
Company with global presence

Source Storage

HPE

Target Storage

Dell/EMC Unity FC
All-Flash Array

Number of Hosts

160 ESX VM's

Host Applications

Varied

Replication Type

Local

Number of CMO and model

Multiple CMOv and
CMO9000VM's

Insertion Method

Path Insertion

There were some minor performance issues on VMware that the design team addressed by adjusting CMOv settings to maximize the performance of the migration with no impact on the VM's, applications, and databases that were being migrated.

The entire migration project was completed efficiently, on time, and on budget. Cirrus Data's CMOv migration solution enables complex migrations with large version changes to complete while upgrading the underlying storage in one easy step. This allowed the customer to achieve their lofty goals and keep up in a fast-paced global economy.

CHALLENGES

- Consolidation of three HPE storage arrays to one Dell EMC Unity array
- 160 VM's required migrating from ESX 5.1 to ESX 6.7 directly
- ESX vMotion couldn't migrate between specified vCenter versions
- COVID protocols required minimization of on-site work

SOLUTION

- CMOv and CMO9000VM's facilitated upgrading between different vCenter versions
- Software-only migration solution enabled functions to be performed remotely
- Cirrus Data provided Subject Matter Experts for end-to-end migration process, including design, implementation, migration, and cutover

RESULTS

- CMO Migration project was completed on-time and on-budget
- Migration was performed with no impact to production
- CMOv's software-based solution enabled all migrations, installations, and eventual cutovers to be performed remotely
- CMOv simplified a complex migration with major version changes

ABOUT CIRRUS DATA

Cirrus Data Solutions Inc. is a leading technology provider of next-generation solutions for data mobility, specializing in block data migration and protection. The company distributes its solutions through systems integrators, managed service providers, channel resellers, and partners including HPE, IBM, Dell Technologies, Microsoft Azure, AWS, Hitachi, NetApp, Pure Storage, Infinidat, AEBS, AHEAD, CDW, SHI, Park Place, Presidio, ePlus, Insight, Computacenter, Sirius, WWT and many others. Cirrus Data Solutions is headquartered in Syosset, New York and has offices located in Dublin, Ireland, and Nanjing with sales and support offices in Boston and Chicago.
